

Investment objective

The objective is to generate a return over time which at least follows the market development in the global bond and equity market. The fund invests in a global equity and bond portfolio. Equities account for 0%-40%. The companies in the equity portfolio are from various regions, countries and sectors. The equity portfolio will typically consist of shares from 120-140 companies. The bond portfolio is chiefly invested in bonds issued by or guaranteed by states, mortgage-credit institutions and international organisations as well as corporate bonds. Assets are also invested in emerging-market bonds and equities and in corporate bonds. These securities involve a certain degree of risk. At least 75% of the fund assets will at all times be invested in securities issued in euro or hedged to euro.
